

TC Transcontinental Packaging

Manufacturing: Immedion's Cloud Improves Efficiency & Reliability of Enterprise Applications

RESULTS

Seamless transition to Immedion's All-SSD Cloud Storage infrastructure

Improved efficiency and processing times

Shorter reboot period

Reliable and efficient application performance

"The flexibility and quality storage performance has really made a difference in our processing times. Immedion made the transition process so seamless and easy that I never hesitate to work with them to add more storage," said Mike Grabski, TC Transcontinental's IT Services Manager.

"Since switching to Immedion's Cloud, our efficiency has continually improved. Now our VMs run incredibly fast and our reboot times have decreased substantially from minutes to mere seconds."

THE CLIENT

TC Transcontinental Packaging develops packaging and coated substrates that protect everything from the food we eat, to medical supplies, to the touch screen devices in our pockets. As a global leader in high performance packaging, TC Transcontinental is dedicated to providing solutions that enhance the safety, quality and convenience of products we use every day.

CHALLENGE

In manufacturing every second translates to profit and revenue, making a smoother, more efficient process all the more important. In order for TC to continue to produce quality products, they need their applications and technical environment to consistently be not only up and running, but running smoothly, efficiently and quickly.

TC has an abundance of data and information stored every minute, all of which is important to their manufacturing processes. Due to inefficient storage, some customers within a multi-tenant Cloud environment experience unpredictable application performance. Knowing this, TC sought a scalable and flexible Cloud solution with high performance storage capabilities that would save them valuable time with a lower total cost of ownership.

SOLUTION

When TC chose Immedion's All-SSD Cloud storage solution, Immedion facilitated the switch with no downtime. The process was seamless and ensured that none of TC's global facilities experienced any lag during the transition period.

Immedion's Cloud storage infrastructure is purpose driven and delivers quality performance in storage and deployment regardless of additional tenants within the Cloud structure or continued heavy usage. The system of arrays allows TC to meet business demands by ensuring that resources can easily be added or removed as needed, giving them more flexibility and scalability within their IT infrastructure.

RESULTS

TC Transcontinental has since transferred nearly their entire environment from messaging to production to Immedion's Cloud. Switching to a high performance Cloud, especially with such a seamless transition, has improved the overall efficiency and processing times at TC. Better and faster storage has meant increased productivity and a better user experience overall.
